

## CANADIER COUPLING DEVICE

**Compact and safe coupling device** for attaching a Canadian directly to the towbar of a snowmobile or ATV.

The direct attachment to the drawbar bracket results in a **very stable guide**.

A joint is built into the snowmobile towbar to prevent the snowmobile from moving up and down on the Akja. The **low center of gravity** of the Canadier makes it almost impossible to tip over.

The coupling device can be easily removed and stowed on the roll bar of the snowmobile.

While the coupling device is in use, the two **drawbars** can be **attached** to the Y-holder **on the side of the Canadier**.

The snow guard protects the person being transported from whirled up **snow and ice**.

Art. No.	<b>93069</b>	
Dimensions	Length:	550 mm
	Width:	1200 mm
Weight	Total:	5,9 kg
